

HEAT CABLES AND CONTROLS

High Wattage Cables

These cables are for use in preventing water line freeze-ups in areas with extended periods of low temperatures. Each combination of lengths and wattage below provides 5 watts / ft of cable, which is adequate to protect water lines down to 10 °F. For protection to zero Fahrenheit, install two cables into the line. All models listed are 120 V cables. **CAUTION:**

Heat cables must not be shortened or spliced. Heat cables cannot be used with 3/16" or 3/8" plastic flexible tubing.
